QUARTERLY ACTIVITIES REPORT FOR THREE MONTHS ENDED 31 MARCH 2010

1. Highlights

- ❖ Bathurst enters into JV with L&M Coal on Buller Coal Project, New Zealand
- ❖ High quality coking coal province
- ❖ Exploration potential of 50 to 90 million tonnes of coking and thermal coal.
- ❖ Definitive Feasibility Study (“DFS”) commenced for open cut operation with target production within 18-24 months
- ❖ Drilling program targeting JORC compliance for initial production resources underway

2. Overview

The Board of Bathurst Resources Ltd (“Bathurst”) is pleased to present its quarterly activities report for the quarter ended 31 March 2010.

The focus for the quarter was predominantly on project acquisition and evaluation. Following due diligence on its portfolio of US and NZ assets, the Company elected to focus solely on the highly prospective, high quality hard coking coal project in the Buller Coalfield in New Zealand.

Bathurst intends to spend the majority of 2Q 2010 undertaking due diligence on the Buller Project including:

- Conducting further drilling on the Buller tenements;
- Establishing a JORC compliant Resource Statement at the Escarpment;
- Advance the DFS on mining the Buller project;
- Finalise the Sale & Purchase Agreement with L&M Coal; and
- Seeking the various approvals for mining the Buller project.

3. Buller Coalfields

The Buller Coalfield is situated on the west coast of the South Island of New Zealand. It is regarded as one of the country's most significant fields and is particularly well known for its production of high quality, low ash, high fluidity coking coals.

Solid Energy's Stockton opencast mining operation is also located at Buller. The state-owned mine produces about 2 million tonnes per annum of high-value coal. Most of the coal mined at Stockton is exported for use in steel mills in India, China, Japan, South Africa and Brazil.

The Buller Project is expected to produce the same high quality coal from the same seams mined by Solid Energy at Stockton.

4. Project Acquisition

Bathurst and L&M Coal Holdings have signed an agreement whereby Bathurst will work in a joint venture with L&M Coal to develop the Buller Project as well as providing Bathurst the sole and exclusive right to execute a Sale and Purchase Agreement to acquire all of the shares in L&M Coal. The terms of this agreement are expected to be finalised shortly.

L&M Coal has established exploration potential in excess of 50 million tonnes of coking and thermal coals within two permits that cover over 10,000 hectares of the Buller Coalfield with significant further exploration potential remaining within the permits.

5. Project Activities

5.1 DFS

During the March 2010 Quarter Bathurst commenced a DFS for the Buller Project. Bathurst's target is to develop a 1 mtpa coal mine producing predominantly high quality coking coal to be in production in late 2011.

Bathurst appointed Marston International as its DFS study managers. Marston International is a subsidiary of leading mining consultants Marston & Marston who are headquartered in St Louis, Missouri, USA.

The appointment of Marston follows the completion of the Bathurst's initial due diligence review undertaken on the Buller Project and is the next step towards the development of this project. The DFS is expected to be completed in 3Q 2010.

5.2 Drilling Program

During the Quarter, Bathurst advised the market of its estimates of an exploration potential for the Buller Project of 50 – 90 million tonnes. As part of the DFS, Bathurst is undertaking a two stage drilling program at Buller to:

- Upgrade historical drilling at the project to current JORC standards;
- Prove up a minimum 5 – 7 year mine life at the Escarpment; as well as
- Preparing the foundation for a minimum 20 year mining operation at the Buller project.

The first stage, which is currently in progress, focuses on the Escarpment, the area targeted for coal production for the first five to seven years of mine life. Approximately 7 holes totalling 427 metres of drilling are planned. The Escarpment already has some 60 drill holes in it.

The aim of the first stage drilling program is to provide geotechnical and coal quality parameters as well as allowing recalculation of resources and reserves to JORC compliant standards. The drilling program should be completed in mid May 2010. Bathurst expects to be able to announce a JORC compliant Resource Statement for the Escarpment in late May 2010.

The second phase of drilling will focus on exploration to the north of the Escarpment. The aim of this program is to confirm the results of historical drilling to allow a JORC compliant resource calculation. The program will both twin some of the existing approximately 300 holes in the Buller region to provide additional information on the coal quality as well as extend the drilled area. Bathurst believes that there is potential to increase the size of the target resource beyond the initial indications of 50 – 90 million tonnes.

The second phase of drilling should be completed by July 2010. Bathurst expects to be able to announce an updated JORC compliant Reserve and Resource for the Buller Project in August 2010.

5.3 Other

Subsequent to the end of the March 2010 Quarter Bathurst has also commenced discussions with potential providers of:

- Labour and equipment for the proposed mine;
- Various New Zealand Government departments;
- Power; and
- Rail and port infrastructure.

Whilst these discussions are ongoing, Bathurst is encouraged by the progress that has been made to date.

6. Corporate

During the March 2010 Quarter, the Company completed a placement of 12.5 million shares at \$0.08 per share raising A\$1.0 million to provide ongoing working capital as well as to support project acquisition.

Subsequent to the end of the Quarter, Bathurst held a General Meeting at which shareholders approved a resolution allowing the placement by the Company of up to 125 million shares on certain terms and conditions.

With the focus on the Buller Project in New Zealand, Chuck Griffith resigned from the Board of Bathurst. Chuck brought considerable value and insight to the Board with his knowledge and experience in Appalachian coal mining and we thank him for his service.

Bathurst is currently seek to add skills and experience relevant to the Buller Project by the appointment of suitably qualified independent non-executive Directors. The Company's aim is to have a majority of non-executive Directors on the Board by the end of 2Q 2010.

The information in this announcement that relates to exploration results, mineral resources or ore reserves is based on information compiled by Dr James Pope, of CRL Energy of Christchurch New Zealand, who is a consultant to the company and is a member of the Australasian Institute of Mining and Metallurgy. Dr Pope has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Dr Pope consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Cash Flow Statements* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
